Technology Advisory

What we do

We bring independent advice and guidance, acting as a trusted advisor and helping you to analyse your technology position in relation to your strategic ambitions.

We strive to know your business, its goals, and constraints, so that whether it is developing bespoke software, automating business processes, embedding robotics and AI, moving to the cloud, or otherwise enhancing digital systems, we can help you re-design your technology landscape and unlock the wider value potential to your organisation.

Benefits

Creating solutions for today and the future

Independent advisory brings a fresh perspective and an independent voice, developing innovative strategies and roadmaps.

External support can help to prioritise objectives and narrow down the solutions best suited for success, as well as saving time and money.

Whether you are addressing risk, optimising technology that is already in place, or undergoing transformation it is important to consider the technology landscape in the wider business context.

When you choose us, you choose people who will really care about your business and have an eye on the future, not just on finding solutions for today.

Our process

Technology Visioning and Transformation

- Find the right direction

Painting a picture of the future in terms of the technology you will be using and how it will serve your clients or reflect your strategic ambitions can be challenging.

We help you facilitate your thinking and innovatively address any constraints or implications around your technology vision. We help you challenge the status quo, have balanced discussions and draw considered conclusions, so you are in a stronger position to take the next step in your transformation journey prototype, whether that be an investment business case, the confidence to commission a proof of concept or pilot, or to map out the next steps in delivering the vision.

Technology Strategy and Roadmap

- Move big ideas forward

To be successful, your organisation must continuously innovate, changing how you operate and reconsidering your business model and customer needs to leverage emerging technology and move along your digital journey.

But strategy is not just about process. Our expert teams collaborate with you to look at the current capabilities, technologies, processes and/or ways of working and develop a strategy to achieve your goals. Our priority is to deliver practical, implementable recommendations which will help you understand the next steps as well as meet your longer-term objectives.

Technology Advisory and Assessment

- Ready for execution

Our team of experts consider your technology within the broader business environment and perform tactical deep dive assessments and health checks of your current capabilities, technologies, processes, and ways of working, in order for you to understand where there are risks, opportunities or interventions required to meet a particular vision or ask.

Where the role is missing, we provide a fractional CTO and help you to work through any change impacts before making recommendations, so that we leave behind an environment where day to day business and delivery relationships remain intact.

Operational Excellence

- Improve efficiency and value delivery

IT efficiency is no longer seen in terms of simply lowering cost base, scrutinising individual productivity, or coding errors. Instead, a more holistic view is taken around how decisions are made, how bottlenecks are removed and the role of IT delivery within the entire organisation.

At NashTech, we look at your vision and ambition, current organisational structure and operating environment and propose a future IT operating model design alongside a set of choice-points for you to consider, to help you make your IT teams operate more optimally.

Why NashTech

The NashTech team come from a wide range of backgrounds including major corporates, consultancies, public sector organisations and charities, and bring rich sector knowledge to the table. We are different because our discussions with you are value-oriented, advising on how and where to invest in your technology strategy.

We encourage you and your people to step away from your day-to-day thinking, providing you with different perspectives from within and outside your organisation to generate ideas with broader range and see beyond the obvious solutions to unlock creativity and yield exciting results.

We stay for the ride too; we can partner seamlessly with you and the thousands of technical experts based in our development centres to enable you to achieve your planned outcomes. We're equipped with a unique network of 3,000 colleagues across 19 countries, that realises the potential.
